

Manual vices for extinguishers

VIF series

For the safest maintenance of fire extinguishers

SWINGER

APPLICATIONS

Manual vices, VIF series, are suitable for all portable extinguisher locking operations during their maintenance or refilling. These vices are available in three versions.

The standard version (VIF model) can be used mounted on a workbench or "alone".

Some special versions are also produced: the VIF/BIL and VIF/BIL1 models to block extinguishers on a scale and the SWINGER to rotate the extinguishers by 360°.

AVAILABLE MODELS

- > VIF
- > SWINGER
- > VIF/BIL
- > VIF/BIL1

ADVANTAGES

Fastening holes allow the VIF vices to be secured to a work-bench or to other surfaces. Clamping does not require any power supply and it is always fast and easy.

The rubber covering the vice jaws ensures a perfect grip without damaging the external surface of the extinguisher. The VIF/BIL and VIF/BIL1 models enable CO₂ portable extinguishers and cylinders to be blocked on the filling scale.

The rotating model, SWINGER, is particularly suitable to test extinguishers because it allows the extinguisher to be safely rotated by 360°.
